PROJECT: Rouge River Supplemental Watershed Study, MI

DESCRIPTION: The study area encompasses 48 communities and portions of 3 counties of southeast Michigan. The supplemental basin-wide watershed management study explores multipurpose water quality management measures and improvements, including flow management, the ecological/physical impacts of watershed dams, stream buffering and general riparian corridor management. The study also investigates the urban impacts on cold-water fisheries, natural resource preservation and ecosystem restoration in an urban setting, and the Rouge's environmental infrastructure, navigation recreation and education opportunities, and flood management issues.
