C-GLFER-Salt River Marsh Coastal Habitat Restoration, MI

Habitat Focus Area

Project Location: The Salt River is located in Chesterfield Township, Macomb County, Michigan.

Project Description: This project will restore and protect the Salt River Marsh near Anchor Bay in Lake St. Clair. The project area has been heavily infested with the invasive Phragmites plant, which chokes out other vegetation and fills in fish spawning habitat. The project area would be dredged to remove the Phragmites and restore depths in the Salt River. The project will be linked with a recreational/educational project being developed just downstream by Macomb County. This project is authorized under Section 506, WRDA 2000 Great Lakes Fishery & Ecosystem Restoration (GLFER) Program.

Non-federal Partner: Michigan Department of Natural Resources (MDNR); Southeast Michigan Council of Government (SEMCOG)

Project Status: The project was initiated in FY13 with the development of a Preliminary Restoration Plan (PRP). The project received funding in FY15, which was used to conduct a hydrologic evaluation of the project site, and to coordinate with potential project partners at Wayne State University. The project is currently on hold pending identification of a non-Federal sponsor that could partner with the Corps in the completion of the Feasibility Report.

Estimated Project Costs	
Federal	2,250,000
Non-Federal	1,103,925
Total	3,353,925
