BUILDING STRONG

CAP-1135-Manistique Sea Lamprey Barrier, Manistique, MI

Description

The Manistique River watershed encompasses approximately 1,480 square miles. The proposed barrier location is just north of the U.S. 2 Highway Bridge over the Manistique River in the vicinity of the old Manistique Papers, Inc. dam. The project is within the Manistique Area of Concern. The sea lamprey is a non-indigenous species that gained access to the Great Lakes in the early 1900's. They were a major cause of the collapse of lake trout, whitefish and chub populations during the 1940's and 1950's. The existence of the Great Lakes fishery would be at stake without the control of this exotic species.
